

# Autonomous Robot

By: Saksham Lubana

Computer Science and Programming, Period 0

# Introduction to the project.

- **Purpose**
  - **create fully autonomous robot**
    - **solve any maze, without needing any help**

Introduction to the project.

- **Scope**
  - **Uses 1 Arduino Qwiic and 4 AA batteries.**
  - **Maze has left and right turns, varied straight sections**
  - **Only Arduino components (except rubber bands)**

- **Scope**
  - **Uses 1 Arduino Qwiic and 4 AA batteries.**
  - **Maze has left and right turns, varied straight sections**
  - **Only Arduino components (except rubber bands)**

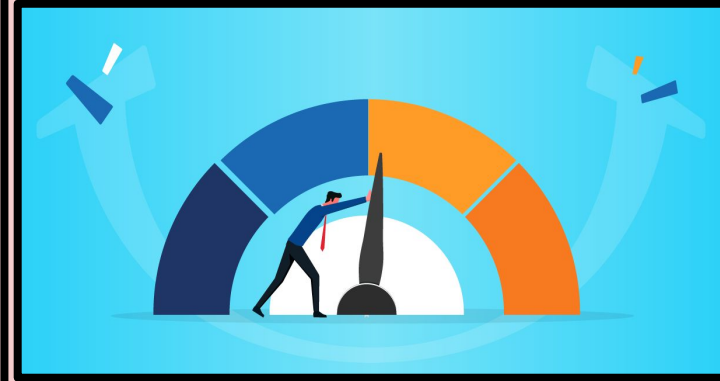

# Objectives & Requirements

- **Functional Requirements**
  - **Green button = Start**
  - **Red button = Stop**
  - **Green LED = Robot moving**
  - **Red LED = Obstacle < 3 inches**

# Objectives & Requirements

- **Performance Requirements:**
  - **Complete maze < 1 minute 30 seconds**
  - **No human intervention (-5 points)**
  - **Unable to solve maze is -15 points**
  - **Unable to move is -30**

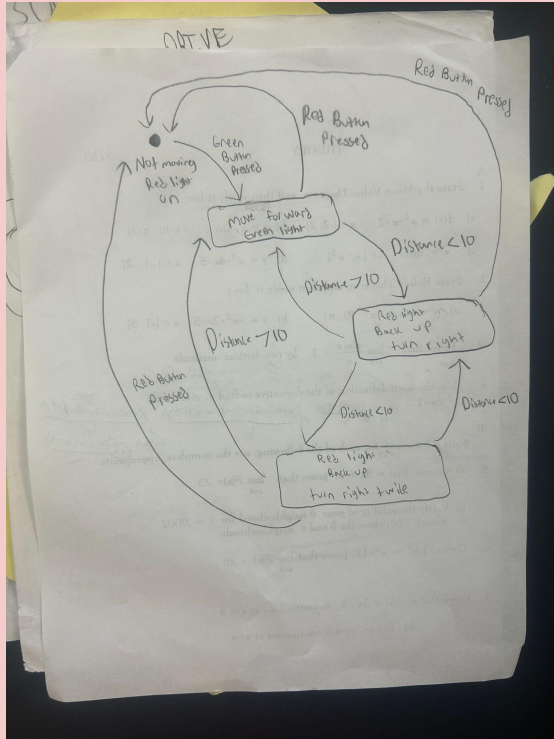

# Objectives & Requirements

- **Constraints**
  - **Only Arduino components**
  - **Must be autonomous for an A grade**

# System Architecture and Design (Block Diagram)

# System Architecture and Design (Component List)

- **26 Jumper wires**
- **3 330 $\Omega$  Resistors**
- **1 4 pin LED**
- **1 Distance Sensor**
- **2 Motors**
- **2 buttons**
- **1 Motor Driver**

# System Architecture and Design (Chassis and Drive)

# System Architecture and Design (Sensor Placement)

- **The Distance Sensor is placed with this orientation on these specific pins**
- **A14 - VCC**
- **A15 - Trig**
- **A16 - Echo**
- **A17 - GND**

# System Architecture and Design (Electrical Wiring)

- **Pin Assignments:**
- **Jumper Wire (J7 - Digital Pin 10)**
- **Jumper Wire (E14 - 5V Rail +)**
- **Jumper Wire (E15 - Digital Pin 6)**
- **Jumper Wire (E16 - Digital Pin 5)**
- **Jumper Wire (E17 - GND Rail -)**
- **Jumper Wire (J18 - Digital Pin 4)**
- **Jumper Wire (E19 - GND Rail -)**
- **Jumper Wire (J20 - Digital Pin 3)**
- **Jumper Wire (J21 - Digital Pin 0)**
- **Jumper Wire (J22 - GND Rail -)**
- **Jumper Wire (J24 - Digital Pin 2)**

# System Architecture and Design (Electrical Wiring)

- **Pin Assignments continued:**
- **Jumper Wire (J25 - GND Rail -)**
- **Jumper Wire (J27 - Digital Pin 7)**
- **Jumper Wire (5V Rail + - 5V (Red Board))**
- **Jumper Wire (GND Rail - -GND (Red Board))**
- **Jumper Wire (5V Rail + - 5V Rail +)**
- **Jumper Wire (5V Rail + - 5V Rail +)**
- **Motor Driver (C1 - C8) & (G1 - G8)**
- **Right Motor (Red - A4) & (Black - A5)**

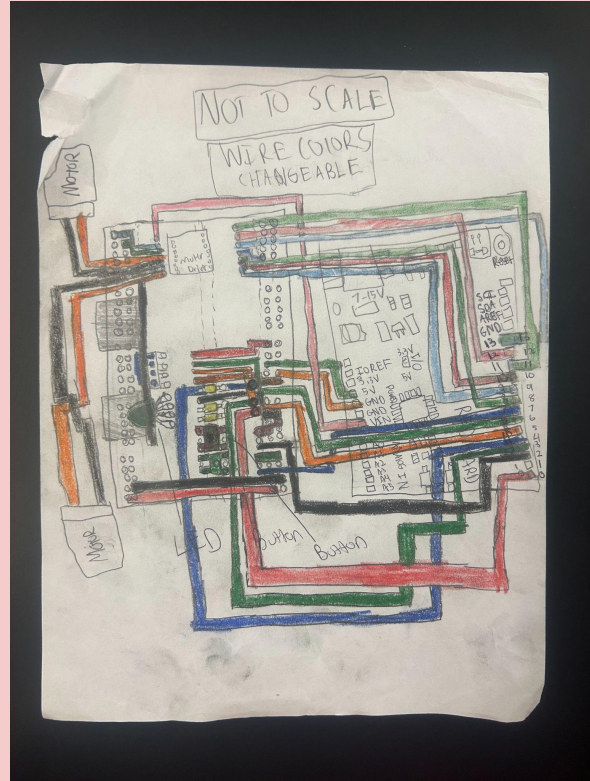

# System Architecture and Design (Electrical Wiring)

- **Pin Assignments continued:**
- **Left Motor (Black - A6) & (Red - A7)**
- **Distance Sensor (A14(VCC), A15(Trig), A16(Echo), A17(GND))**
- **RGB LED (A18(Blue), A19(GND), A20(Green), A21(Red))**
- **330 $\Omega$  Resistor (E18 - F18)**
- **330 $\Omega$  Resistor (E20 - F20)**
- **330 $\Omega$  Resistor (E21 - F21)**
- **Red Button (D22 - D24) & (G22 - G24)**
- **Green Button (D25 - D27) & (G25 -**

# System Architecture and Design (Electrical Wiring, Diagram)

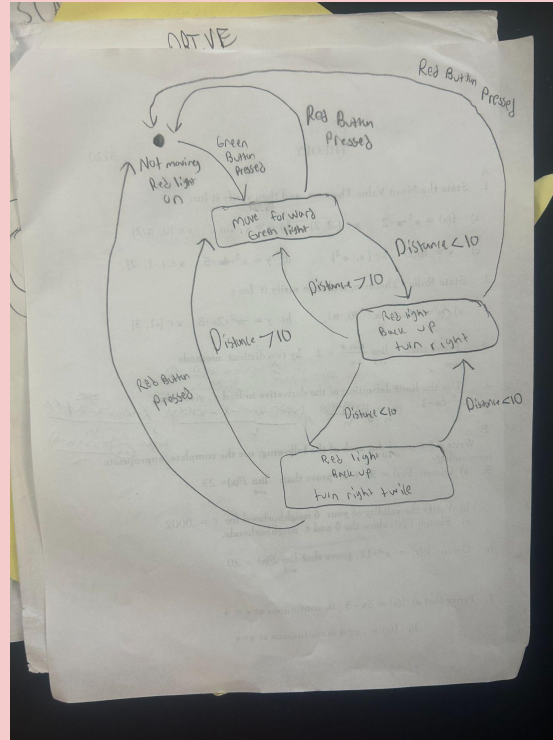

# Maze-Solving Algorithm

- **Algorithm Description:**
  - **if no wall(green light on)**
    - **Move forward**
  - **If wall detected(red light on):**
    - **turn right**
    - **if wall**
      - **turn right again**
    - **Else**
      - **move forward**

# Maze-Solving Algorithm (Flowchart)

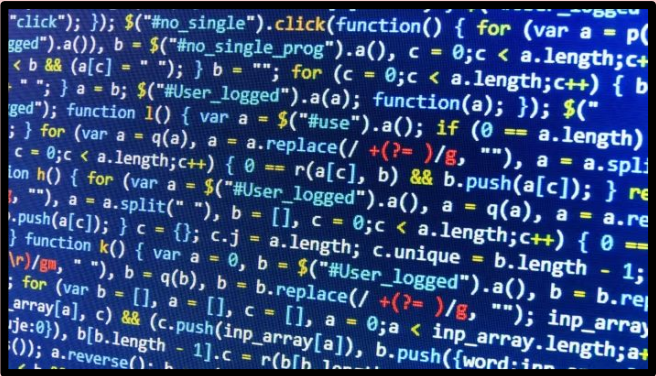

# Maze-Solving Algorithm

## ● Pseudocode

- if (start\_button\_pressed) {
- if (distance < 3) {
- Red\_light();
- turn\_right();
- if (distance < 3) {
- Red\_light();
- turn\_right\_twice()
- }
- }
- else {
- Green\_light();
- move\_forward();
- }
- }
- else{
- Stop moving();
- Red\_light();
- }

```
"click"); }); $("#no_single").click(function() { for (var a = p(
gged").a()), b = $("#no_single_prog").a(), c = 0; c < a.length; c++
< b && (a[c] = " "); } b = ""; for (c = 0; c < a.length; c++) { b
"; } a = b; $("#User_logged").a(a); function(a); }); $("
ged"); function l() { var a = $("#use").a(); if (0 == a.length)
; } for (var a = q(a), a = a.replace(/ +(?= )/g, ""), a = a.spli
c = 0; c < a.length; c++) { 0 == r(a[c], b) && b.push(a[c]); } re
lon h() { for (var a = $("#User_logged").a(), a = q(a), a = a.re
push(a[c]); } c = {}; c.j = a.length; c.unique = b.length - 1;
} function k() { var a = 0, b = $("#User_logged").a(), b = b.re
r)/gm, " "); b = q(b), b = b.replace(/ +(?= )/g, "");
; for (var b = [], a = [], c = [], a = 0; a < inp_array.length; a
rje:0)), b[b.length - 1].c = r(b[h
()); a.reverse(); b
```

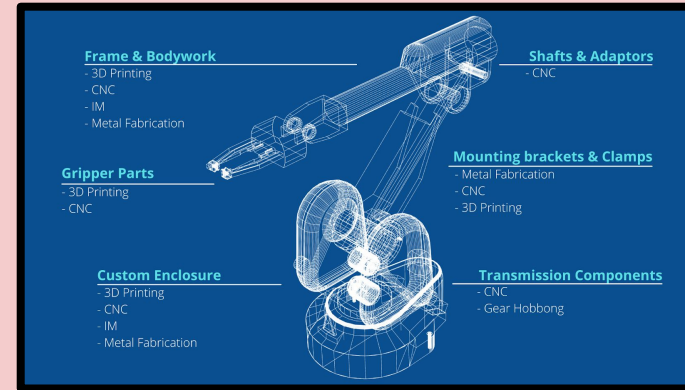

# Software Design

- **Module Breakdown:**
- **Sensor Reading - Detects object distance to guide robot actions.**
- **Motors - used to make the car move and turn**
- **Buttons - Start/stop robot based on input signals**

# Software Design

- **Module Breakdown continued:**
- **LED** - Changes color based on sensor and button input, green when moving, red when an object is close or stop is pressed.
- **Motor Control** - Sends commands to motors to control spin duration, direction, and speed.

# Testing & Validation

- **Test Plan:**
  - **Buttons:** Press the on button to start movement and turn the LED green; press off to stop and turn the LED red.
  - **LEDs:** Verify initial red light, green when started, and red when an object is detected.
  - **Motors:** Place the car in the maze and confirm it makes all required turns.

# Testing & Validation

- **Success Criteria:**
- **On button starts the car (green LED, motors moving forward).**
- **Off button stops the car (red LED, motors off).**
- **If an object is detected, the car turns away and the LED turns red.**

# Testing & Validation

- **Results Log**
- **Test 1: LED does not work, Button Does not work, the car does work however and it can move in the maze, does hit walls and not turn effectively.**
- **Test 2: LED works, buttons dont work, the car does the same as Test 1**
- **Test 3: LED does not work, Buttons dont work, car does not move.**

# Testing & Validation

- **Results Log continued:**
- **Test 4: LED works, Buttons work, car is unable to turn.**
- **Test 5: LED works, Buttons work, car can move and turn. When placed in maze it starts going through the maze but gets stuck 25% of the way through**

# Testing & Validation

- **Results Log continued:**
- **Test 6: LED Works, Buttons work, car can move and turn. When placed in the maze it starts going through the maze and gets stuck 10% of the way through**
- **Test 7: LED Works, Buttons work, car can move and turn. When placed in the maze it starts going through the maze and is unable to make the 180 degree turn.**

# Timeline & Milestones

- **5/9/25 - Research & design document**
- **5/16/25 - Basic navigation prototype**
- **5/23/25 - Full maze tests & tuning**

## Summary of our experience

**All in all I think that this experience was great, me and shahil worked a lot together on the robot and had lots of fun doing it.**
